

Suspected
Prostate
Cancer

Consider DRE and PSA in men with:

- Any lower urinary tract symptoms
- Erectile dysfunction
- Visible haematuria (in absence of UTI or persisting after successful treatment)

In patients with estimated life expectancy <10 years, only refer via 2 week cancer pathway if

- PSA>20
- Symptoms/signs metastatic disease
- Bone pain
- Lumbar/sacral neurological signs or symptoms

Please tick reasons for referral

PSA & DRE

PSA above age-specific reference range (Repeat 6 weeks after UTI / prostatitis)

Suspicious Prostate on DRE
